

# BLACK PEARL<sup>®</sup>

## Waterproofing Systems

from The Barrett Company, LLC

## WHY CHOOSE US

For over 10 decades, the Barrett Company has provided hands-on experience, professionally engineered products, & systems in the high-performance roofing & waterproofing applications.

Satisfaction

Loyal & service-oriented

Team support

Labor & material warranties available

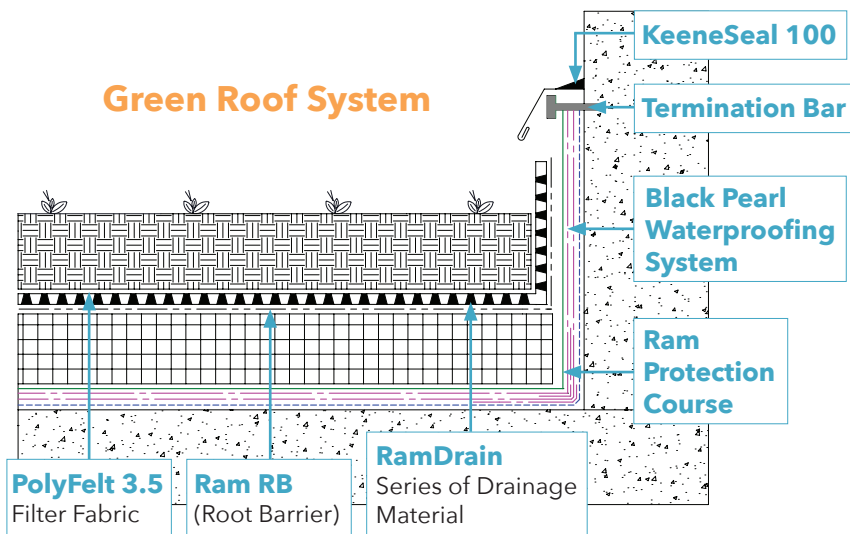

**Black Pearl is a unique COLD fluid waterproofing system** designed to go on green and damp concrete along with being installed at temperatures that commonly are not allowed by other technical platforms.

The design of the **Black Pearl** system for waterproofing horizontal plaza deck, green roofs, and backfill walls follows the methodology of hot rubberized asphalt with a multi-layer built-up system to create a robust system.

## Feature & Benefits

- Installed on Green and damp concrete
- Applied as low as 0°F (-18°C)
- No wait between layers
- Zero out-gassing
- Tenacious adhesion to concrete in difficult conditions

### Green Roof System

**BETWEEN THE WORLD  
AND THE WEATHER SINCE 1928**

## Layers

Black Pearl is installed in a multi-ply configuration; the adhesive primer matrix causes the sheets to fuse together chemically, resulting in a heavy-duty monolithic assembly that remains firmly adhered to concrete substrates.

The first layer is the **Black Pearl Primer Adhesive**, a single component material that can be applied easily with a squeegee. Next, the **Black Pearl Membrane** is immediately installed into the Primer Adhesive with zero waiting time.

The final layer, the **Ram Protection Course** can be immediately installed on to the Black Pearl Membrane.

Consult your local Barrett Representative for job-specific requirements.
