

Project Profile Willis Tower Chicago, IL

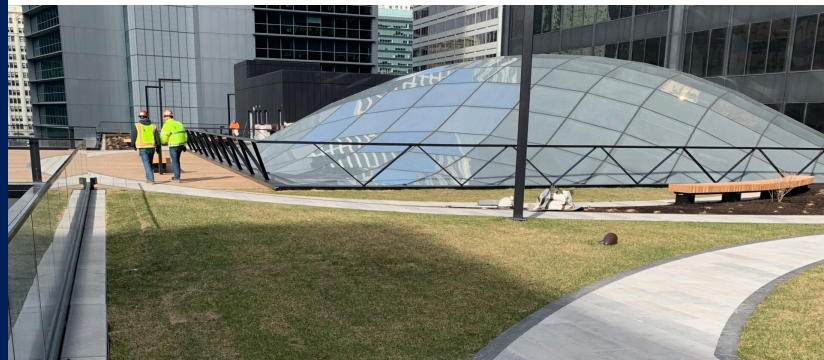

Job Size: 87,391 sq ft
Building Owner: Blackstone Group
Roofing Contractor: Kedmont
Waterproofing • 773-539-9595

When you think of a big city often you think about skyscrapers, traffic, and your favorite sports team. These big cities often produce a lot of emissions into the atmosphere. In fact, Chicago drives 2.6% of the national carbon footprint (citycarbonfootprints.info). A carbon footprint is the amount of greenhouse gases and carbon dioxide emitted by something (Merriam-Webster). One way to combat this carbon footprint is to install a green rooftop!

At a project site in Chicago, they were looking to incorporate a greenspace on their roof. The building contractor that had this high-profile, three-year project thought of Barrett for the job.

Since the contractors have used Barrett's products for over 40 years, they decided to use the RamTough 250 with fabric reinforcement to ensure success of this project. They used RamTough 250 to help create a waterproofing system.

RamTough 250 is a hot applied rubberized asphalt membrane which forms a completely monolithic, waterproof system without seams or joints. RamTough 250 exhibits excellent adhesion to horizontal and vertical surfaces. RamTough 250 forms a robust monolithic waterproof system that does not allow water to migrate under the membrane.
