

# Project Profile Fort Knox Bullion Depository

Fort Knox, Kentucky

## Job Size:

**Building Owner:** United States Mint

**Roofing Contractor:** Swift Roofing

**800-844-4920 • 800-844-4921**

Can you imagine the weight of about 125 semi-trucks, but in gold? Approximately, 10 million pounds, or \$236.4 billion, of gold is held at the Fort Knox Bullion Depository, also known as the "gold vault," in Fort Knox, Kentucky. The vault holds more than half of the gold reserves of the United States making the protection of the vaults contents a top priority for the contractors and architects tasked with reroofing it.

To complete the job, the United States Department of the Treasury chose Barrett's RamTough 250 to reroof the vault. RamTough was chosen based upon the dependable and time-proven performance it has provided the government on hundreds of important projects such as the White House in Washington, D.C. and the Lincoln Memorial.

The building contractor, Swift Roofing, used the RamTough 250 DM PMR protected membrane roof system. It is a hot-applied rubberized asphalt membrane which exhibits excellent adhesion to horizontal and vertical surfaces and forms a robust monolithic waterproof system that does not allow water to migrate under the membrane. Swift Contracting is a trusted Barrett partner continuously using our products for over 20 years.

Barrett's engineered components provide a roofing system that is simply the highest performing, toughest roof available — the ultimate high-performance option by design. Leaving the most heavily guarded building in the world even more protected.
