

Greenroof-Roofscapes®

Roofscape® Edge

DESCRIPTION

Roofscape® Edge is designed as a definite boundary between gravel/paver and growth media that allows the flow of water but not of the substrate. Specific to this product, it:

- Utilizes a **"smooth slide" design** to make secure, invisible connections
- Has **prefabricated corners** for ease of installation.
- **Prevents overly moist media conditions** around the perimeter or in transition areas of the roof, thus preventing anaerobic growing conditions.

USES

- Extensive vegetated roofs.

INSTALLATION

- Overlap boards by one cup
- Cover boards with overburden immediately to protect from UV rays & wind uplift
